Education

California State University Monterey Bay | Bachelor of Science in Computer Science

May 2025 | California

Technical Skills

AI & Automation: LLM Integration (LLaMA, LLaVA, Claude API, ChatGPT, Ollama), Snowflake, Cortex AI, Snowpipe, AWS SNS, ETL/ELT, PyTorch, MediaPipe, Gradio

Data & Programming: Python, Java, PostgreSQL, Snowflake, JavaScript, SQL, XML, RESTful APIs

Database & Data Integration: Stored Procedures, Triggers, Functions, Data Mapping, Source to Target Mapping, Data Profiling, Data Harmonization, Metadata Management, Data Modeling, Data Quality

Analytics & Visualization: Tableau, Power BI, DAX, Looker, LookML, Excel, Statistical Analysis, Anomaly Detection, A/B Testing

Tools & Infrastructure: Git, Jira, AWS, dbt, Azure Data Factory, Medallion Architecture, Kiro AI, Salesforce, Ellucian, Banner API, Banner Ethos Integration, UNIX/Linux, Shell

Certification: Snowflake - SnowPro Core COF-C03, Python - PCEP-30-02 PCEP™

Experience

FastAnalytix LLC | Data Engineer

July 2026 – Present | Texas, USA

- Designing and managing Medallion architecture in Snowflake, building bronze, silver, and gold layers to organize and transform data ingested from AWS S3 via Snowpipe into clean analytics ready datasets.
- Automated fiscal invoice email delivery, reducing manual processing effort by 88%, by orchestrating Snowflake Tasks and stored procedures to process data payloads and trigger notifications through AWS SNS.
- Utilized Kiro AI coding assistant to accelerate pipeline development, reducing implementation time across data engineering task.

Monterey Peninsula College | Data Engineer

July 2025 – July 2026 | California, USA

- Developed 35+ complex SQL reporting and funding calculation models using PostgreSQL and Python across multi-year institutional datasets, supporting fiscal, financial aid, and academic operations for 9,000+ students per term and 500+ staff users.
- Diagnosed and resolved ERP integration pipeline failures by validating SQL transformations, debugging data load errors, and executing Python reconciliation scripts, ensuring zero downstream reporting inaccuracies across fiscal and academic systems.
- Engineered database level workflow automation using SQL triggers and procedural logic, reducing manual processing effort by 70% while strengthening RBAC enforcement and enterprise access controls across 500+ users.
- Served as technical liaison across vendors, functional departments, and internal IT to scope, troubleshoot, and deliver integrations, including resolving a critical third party ERP integration failure and leading end to end deployment of an AI chatbot, coordinating stakeholder communication throughout.

Mozilla AI | Software Engineer Intern

Jan 2025 – May 2025 | California, USA

- Independently conceptualized and led end to end development of an LLM powered wireframe generator using Python, Ollama (LLaMA 3), Gradio, and Draw.io, compressing UI design time from 1-3 hours per screen to under 30 seconds.
- Drove iterative refinement of prompt logic and validation layers through user testing cycles, achieving 80% output consistency across production deployments.
- Eliminated manual revision rounds by implementing structured validation checks and frontend/backend integration, ensuring consistent output quality across all model iterations.

Projects

Snowflake Intelligence Data Platform Project

Dec 2025

- Designed a Snowflake schema data warehouse with optimized ETL/ELT pipelines across 100K+ transactional records, leveraging Dynamic Tables, Tasks, and Streams for automated data processing and pipeline orchestration.
- Applied Snowflake Cortex AI powered SQL functions for intelligent pattern detection and anomaly detection using trend analysis and standard deviation monitoring, improving query performance by 25% and anomaly detection accuracy by 71%.
- Configured and tuned Snowflake Virtual Warehouses for optimal compute resource allocation, reducing query execution time and improving pipeline performance across large scale transactional datasets.

Eunoia – AI Face Analysis & Wellness App

Mar 2026

- Built a JS/HTML/CSS web app using MediaPipe to capture and process 468 facial landmarks in real time, serializing landmark coordinates into structured JSON payloads for downstream API consumption.
- Integrated Claude API via REST calls to analyze facial biomarker data and generate personalized wellness recommendations, designing end-to-end data flow from landmark detection through JSON transformation to LLM inference.

Leadership and Involvement

Women in Computer Science - CSUMB | Vice President

August 2024 – May 2025

- Founded and named OtterHacks, CSUMB's first large-scale hackathon, leading team coordination, logistics, and sponsorship for 100+ participants.
